For Immediate Release

iFly GPS™ Adds RealPlan™ to Version 11 Intelligent and Optimized Routing for the Real World

McKinney, TX – March 28, 2019 – Adventure Pilot announces the addition of RealPlan™ to their upcoming major release of iFly GPS™. Version 11 will be available for Android phones and tablets, iPads, iPhones and Windows later this spring with a demo release available at Sun-n-Fun.

The patent pending RealPlan™ feature will optimize a route based on time or cost while considering complex airspace, topography, winds, aircraft performance and fuel costs based on pilot preferences. For those flights beyond the range of a given aircraft, RealPlan™ will select fuel stops with appropriate runway length, fuel cost and fuel type.

“iFly GPS™ is designed for the real world, and our new RealPlan™ feature demonstrates this by simplifying the planning phase, and providing real monetary savings that would normally go unnoticed.”, says Walter Boyd, founder and chief architect at Adventure Pilot. “Image planning a trip over high terrain, active SUAs, TFRs, and strong headwinds. Previously, a pilot would need to manually plan and rubber band around undesirable areas. But with RealPlan™ all you need to do is select your origin and destination airports and iFly GPS™ will do the rest”.

About Adventure Pilot

iFly GPS™ is designed for Android, iOS, Windows and the iFly aviation portable units. iFly GPS™ is the creation of Adventure Pilot and offers powerful navigation solutions that go far beyond the imagination while keeping it simple and intuitive. The App is a game-changing navigation and flight planning solution that provides exhaustive support of AHRS and ADS-B Traffic & Weather devices. Adventure Pilot creates affordable solutions meant to inspire, inform and enable a community of passionate pilots to fulfill their desire for aerial adventures. "Life is in the Journey; it's the destinations you choose that determine your path."
